Notes

Students' responses were deemed unreliable if recent substance use history was inconsistent with their lifetime responses or they reported using a fake drug.

Ethnicity Distribution: other signifies mixed (two or more) races

Lifetime Substance Use: other drugs include methamphetamine or any amphetamine, inhalants, LSD or other psychedelics, ecstasy, heroin, cocaine, cough/cold medicines, Ritalin™, or Adderall™, barbiturates, tranquilizers or sedatives, and any other drug or pill to get "high"

Past Month Substance Use: other drugs includes methamphetamine or any amphetamine, inhalants, LSD or other psychedelics, ecstasy, cocaine, prescription pain medication to get "high" or for reasons other than prescribed (such as Vicodin™, OxyContin™, Percodan™, Ritalin™, Adderall™, Xanax™) and any other drug or pill to get "high".

When multiple drugs are tallied in computations, such as when other drugs are reported, the tables report data for the complete cases and the graphs provide reports for all cases. Complete cases are reports where an individual provided a valid response to all of the terms in a related set. Estimates were insensitive to this analytical decision, resulting in variance of 0.5 percentage points or less.
