

**STORM WATER MANAGEMENT**

The Board of Trustees desires to ensure that, to the maximum extent possible, the district reduce the discharge of pollutants into the water system in order to minimize the threat to water quality from storm water run-off.

The Superintendent or designee shall develop a storm water management plan for board approval describing best management practices, measurable goals, and time tables for implementation in the following areas:

1. Pollution prevention and good housekeeping, such as evaluating waste disposal, material storage, and equipment-cleaning procedures and spill prevention, including at bus maintenance facilities.
2. Illicit discharge detection and elimination, such as maps and programs to detect and eliminate illicit non-storm water discharges.
3. Construction site storm water management, such as reviewing construction plans, inspecting sites, and tracking construction site runoff, as well as erosion and sediment control.
4. Post-construction storm water management, such as developing design standards for preventing runoff and verifying proper maintenance and operation of control procedures.
5. Public education and outreach on storm water impacts.
6. Public participation, such as participation in adoption and implementation of the plan.

The Superintendent or designee shall, from time to time, report to the Board on the status of the district's implementation efforts.
